Glossary

1.   Introduction

This glossary document provides a comprehensive list of terms, definitions, and information related to the design of a client-server application for managing the activity of a tourism agency.

This glossary document is designed to provide a clear understanding of the key terms and concepts involved in the design of the Travel Agency Manager System. It includes definitions and information related to the system itself, as well as terms related to stakeholders, target users, XML, use cases, and supplementary specifications.

In addition to providing definitions, this glossary document also includes format and validation rules where applicable. These rules ensure that data input into the system is accurate, consistent, and adheres to the required format.

2.   Glossary

Term	Definition and Information	Format	Validation Rules
Travel Agency Manager System	A client-server application designed to manage the activity of a tourism agency. This system allows agency employees to add, modify, and delete vacations, client information, and reservations for vacations. It also allows them to store and manage information about clients, vacations, and operators in a database.		
Stakeholders	Individuals or organizations who have an interest in or are affected by the Travel Agency Manager System. This includes agency employees and clients who will use the system regularly, as well as any other parties who may be impacted by the system.		
Target users	Individuals who will be using the Travel Agency Manager System on a regular basis. This includes agency employees responsible for managing and booking vacations, as well as other employees who may use the system for administrative tasks.		
XML	A markup language used to encode documents in a format that is both human-readable and machine-readable.	Text-based format that uses tags to define elements and attributes to provide additional information about those elements.	

Use-case	A description of how users will interact with the Travel Agency Manager System in various scenarios.	A brief summary of the scenario, a list of the steps involved, and any special considerations or alternate paths that may be taken.	
Supplementary specifications	A set of detailed technical specifications that describe the functionality, performance, and other characteristics of the Travel Agency Manager System. These specifications may include information on how data is stored and managed, how the system communicates with external parties, and how user accounts and access are managed.
